

WT- Assignment 5

Q1. Building Simple Web Server

Use http module in the NodeJS to build your simple http web server which will run on port number 4545.

The web server serves on two URL as following

- a. <http://localhost/> (root URL): It should display the text as "Welcome to {Your Name}'s Home page."
- b. <http://localhost/about> : It should display information about yourself such as name, dob, email, Phone no, address
- c. <http://localhost/time>: It should display current date and time on the server.

Q2. Building webserver and Serving Web Page Files using Express

Create a html file **with name as sample.html** which **contain image of any scientist embedded on webpage with tag and one paragraph information about him/her. Also apply the external css where you can add styling such as fonts, background colors, shadows etc.**

Install express module using npm and try to serve some.html once the user enters url as : <http://localhost>

Q3: modify the assignment Q2 in such way that server will now contain multiple html files at least 3 files (for 3 different scientists) now the request url will be in the form <http://localhost/name-of-scientist> based on scientist name specific html file will be served
